

SWITCH

A full featured AFTN/CIDIN message switching system

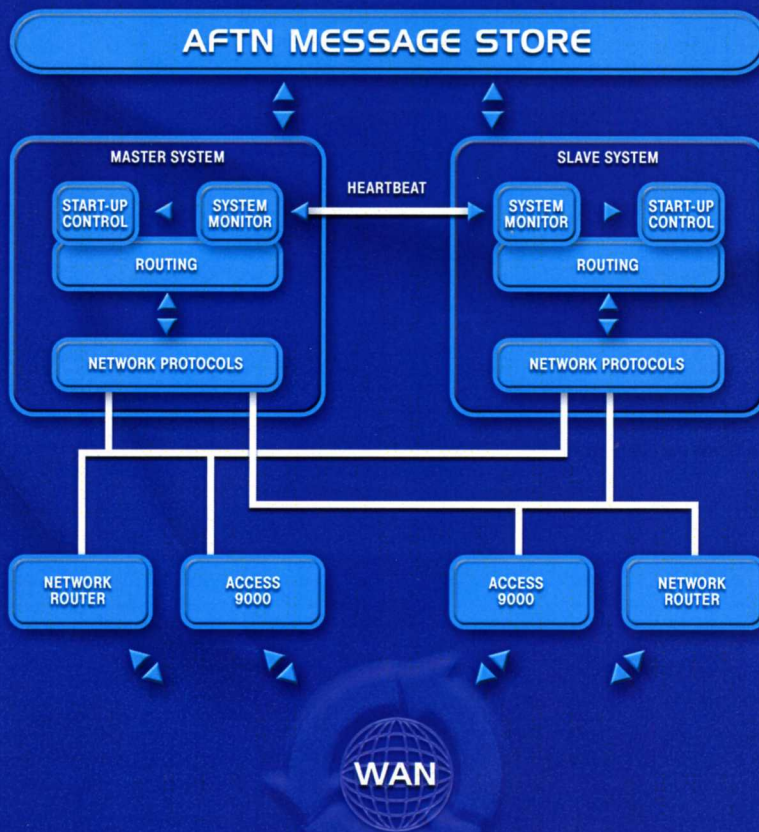

A full featured AFTN/CIDIN message switching system compliant with ICAO Annex 10, volume II and the ICAO EUR CIDIN Manual. Expansion to include an AMHS gateway can simply be achieved through the inclusion of Artemis Gate which can be directly integrated or accessed across the system LAN.

Deployment options range from enterprise AFTN routers to state message switching systems capable of message throughput typical of major regional gateways.

Artemis Switch can be run as a stand alone system or as master/slave with changeover being achieved by monitoring the system heartbeat. All external communication is accessed through the system LAN including asynchronous and X.25 connections (via the Access 9000 communications unit).

AFTN/AMHS System

providing
state of the art
communication systems
for the aviation industry
